PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience building production React.js applications used by 7,000-10,000+ daily users. Built a dynamic theming engine generating 20+ UI shades from 4 base colors, a custom bet-validation system, and converted a hardcoded game timer into a fully API-driven dynamic countdown. Backend experience in C++ from an internal enterprise application internship at Nokia, working across GUI, calculation-tree logic, and configuration templates.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Java

Frontend: React.js, HTML5, CSS3, Responsive Web Design, SPA, Component-Based Architecture, React Hooks, Context API, Zustand, useMemo/useCallback/React.memo

APIs & Performance: REST APIs, Axios, Fetch API, Lazy Loading, Code Splitting, Memoization

Tools: Git, GitHub, npm, Vite, VS Code, Chrome DevTools, Linux

CS Fundamentals: Data Structures & Algorithms, OOP, Operating Systems, DBMS, Computer Networks, Agile/Scrum SDLC

PROFESSIONAL EXPERIENCE

Software Development Engineer 1 (SDE-1)
Jul 2024 - Sep 2026

Arrise Solutions — *Noida, Uttar Pradesh*

- Engineered a dynamic theming system in React.js and CSS that algorithmically generated 20+ UI shades from 4 backend-supplied primary colors in real time, replacing a hardcoded color/shade system and enabling operators to rebrand the UI without frontend code changes.
- Built a custom side-bet input component in React.js with real-time validation (blocking text, negative, and invalid values) that let users enter any valid numeric bet, replacing a fixed preset pattern (0, 1, 2, 5, 10...) and increasing betting flexibility.
- Designed and shipped a responsive React.js virtual keyboard component to support free-text bet entry on touch and mobile devices, extending the side-bet feature across device types.
- Converted a statically hardcoded 2-minute race timer in the React.js game UI into a fully dynamic, API-driven countdown supporting variable race durations (1-7+ minutes).
- Performed 15+ peer code reviews, identifying and resolving 7+ bugs prior to production release on a platform serving 7,000-8,000 daily active users (10,000+ on weekends/holidays).
- Partnered within a 35+ member cross-functional department (backend, QA, 3D, PM) to translate business requirements into pixel-perfect, accessible interfaces across Agile sprint cycles.

Software Development Intern
Aug 2023 - Jun 2024

Nokia Solutions and Networks — *Bangalore, Karnataka*

- Supported maintenance and enhancement of Acord, an internal C++ enterprise application, across its GUI, calculation engine, and configuration layers.
- Assisted in maintaining and debugging the IPU (Input Processing Unit), a tree-structured calculation engine, to ensure accurate processing of business calculation scenarios.
- Updated YAML and Excel configuration templates and supported GUI and plugin module upkeep, ensuring consistency across the application's extensible architecture.

PROJECTS

AccessiScan: AI Accessibility Auditor | Live: accessibility-auditor-nine.vercel.app

- Built and deployed a web-based AI accessibility auditor that scans web content for accessibility issues and surfaces actionable findings, hosted live on Vercel.

Shopping Cart | React.js, Zustand

- Built a React.js shopping cart with global state managed through Zustand, supporting add/remove items, quantity updates, and real-time cart total calculation across components.

IoT in Healthcare Security | IEEE Published Research Paper

- Co-authored "Pragmatic Study of IoT in Healthcare Security with an Explainable AI Perspective," published in IEEE, analyzing IoT healthcare security vulnerabilities.

EDUCATION

Bachelor of Technology, Computer Science and Engineering — **Jun 2024**

KIIT Deemed University | GPA: 8.49/10.0 — *Bhubaneswar, Odisha*

CERTIFICATIONS

- HackerRank — Java, C++, and Problem Solving Certifications | Salesforce CRM Virtual Internship — SmartInternz
